

# TABLE DES MATIÈRES DU VOLUME LX/LXI

## PARTIE 1

T. W. Körner, <i>Devil's staircases, ramps, humps and roller coasters</i> . . . . .	1-14
T. Caputti, <i>The plenary hull of the generalized Jacobian matrix and the inverse function theorem in subdifferential calculus</i> . . . . .	15-20
S. Thangavelu, <i>On almost everywhere and mean convergence of Hermite and Laguerre expansions</i> . . . . .	21-34
J. Yong, <i>Optimal controls for distributed parameter systems with mixed constraints</i> . . . . .	35-48
K. Urbanik, <i>An integral representation of limit laws</i> . . . . .	49-64
P. M. Soardi, <i>Parabolic networks and polynomial growth</i> . . . . .	65-70
L. Colzani, <i>Hankel transform on Lorentz spaces</i> . . . . .	71-76
Y. Sagher, M. V. Siadat and K. Zhou, <i>Norm inequalities for integral operators on cones</i> . . . . .	77-92
R. Kaufman, <i>Bernoulli convolutions—an application of set theory in analysis</i> . . . . .	93-98
R. Goodman, <i>Whittaker transforms on real-rank one Lie groups</i> . . . . .	99-128
R. S. Strichartz, <i><math>H^p</math> Sobolev spaces</i> . . . . .	129-139
Y. Meyer, <i>Construction de bases orthonormées d'ondelettes</i> . . . . .	141-149
A. Benedek and R. Panzone, <i>On the intersection of Sobolev spaces</i> . . . . .	151-155
C. E. Gutiérrez and R. L. Wheeden, <i>Mean value and Harnack inequalities for degenerate parabolic equations</i> . . . . .	157-194
L. W. Baggett, <i>Processing a radar signal and representations of the discrete Heisenberg group</i> . . . . .	195-203
B. Host and F. Parreau, <i>The generalized purity law for ergodic measures: a simple proof</i> . . . . .	205-212
G. S. de Souza, <i>The block decomposition of the weighted Besov spaces</i> . . . . .	213-219

H. Helson, <i>Large analytic functions III</i> . . . . .	221–223
J. C. Peral, <i>On a sum of Vinogradov</i> . . . . .	225–233
A. Torchinsky and S. Wang, <i>A note on the Marcinkiewicz integral</i> . . . . .	235–243
J. M. Ash, A. E. Gatto and S. Vági, <i>A multidimensional Taylor's theorem with minimal hypothesis</i> . . . . .	245–252
J. Bourgain and T. Wolff, <i>A remark on gradients of harmonic functions in dimension <math>\geq 3</math></i> . . . . .	253–260
V. L. Shapiro, <i>One-sided conditions for quasilinear Jacobi differential equations</i> . . . . .	261–273
W. A. Webb, <i>The number of binomial coefficients in residue classes modulo <math>p</math> and <math>p^2</math></i> . . . . .	275–280
J. Siciak, <i>Singular sets of separately analytic functions</i> . . . . .	281–290
S. V. Bochkarev, <i>Rearrangements of periodic multiplicative orthogonal series</i> . . . . .	291–299
D. S. Kurtz, <i>Pointwise convergence of multiplier operators</i> . . . . .	301–304
C. W. Onneweer and T. S. Quek, <i>Multipliers on weighted Hardy spaces over locally compact Vilenkin groups, II</i> . . . . .	305–314
L. Pigno and S. Saeki, <i>On the theorem of F. and M. Riesz</i> . . . . .	315–320
Y. Han, B. Jawerth, M. Taibleson and G. Weiss, <i>Littlewood–Paley theory and <math>\epsilon</math>-families of operators</i> . . . . .	321–359

## PARTIE 2

J. Alvarez and M. Milman, <i>Calderón–Zygmund operators and Poisson-like operators</i> . . . . .	361–378
L. Colzani, S. Giulini, G. Travaglini and M. Vignati, <i>Pointwise convergence of Fourier series on compact Lie groups</i> . . . . .	379–386
J.-P. Kahane, <i>Recouvrements aléatoires et théorie du potentiel</i> . . . . .	387–411
Y. Pan and C. D. Sogge, <i>Oscillatory integrals associated to folding canonical relations</i> . . . . .	413–419
N. P. Schembari and M. Schramm, <i><math>\Phi V[h]</math> and Riemann–Stieltjes integration</i> . . . . .	421–441
G. Godefroy and F. Lust-Piquard, <i>Some applications of geometry of Banach spaces to harmonic analysis</i> . . . . .	443–456
D. Müller, <i>On weighted estimates for the Keakeya maximal operator</i> . . . . .	457–475

C. A. Neff, <i>Boundary convergence of functions in the meromorphic Nevanlinna class</i> . . . . .	477–506
E. Berkson and T. A. Gillespie, <i>The spectral decomposition of weighted shifts and the <math>A_p</math> condition</i> . . . . .	507–518
J. S. Ratti and Y.-F. Lin, <i>A functional equation involving <math>f</math> and <math>f^{-1}</math></i> . . . . .	519–523
W. C. Connett and A. L. Schwartz, <i>Positive product formulas and hypergroups associated with singular Sturm–Liouville problems on a compact interval</i> . . . . .	525–535
Y. Guivarc’h and J. C. Taylor, <i>The Martin compactification of the polydisc at the bottom of the positive spectrum</i> . .	537–546
D. Jerison, <i>Regularity of the Poisson kernel and free boundary problems</i> . . . . .	547–568
R. O’Neil, <i>The Shannon information on a Markov chain approximately normally distributed</i> . . . . .	569–577
L. de Rosa and C. Segovia, <i>Convergence of truncated singular integrals with two weights</i> . . . . .	579–592
B. Bojanov, <i>On the total positivity of the truncated power kernel</i>	593–600
M. Christ, <i>A <math>T(b)</math> theorem with remarks on analytic capacity and the Cauchy integral</i> . . . . .	601–628
L. Corwin and F. P. Greenleaf, <i>Uniform convergence and decay of Fourier series on compact nilmanifolds</i> . . . . .	629–636
E. Fabes, N. Garofalo and S. Salsa, <i>A control on the set where a Green’s function vanishes</i> . . . . .	637–647
R. Seeley, <i>Conic degeneration of the Dirac operator</i> . . . .	649–658
W. Hebisch, <i>A multiplier theorem for Schrödinger operators</i> .	659–664
A. Korányi, <i>Transformation properties of the generalized Muirhead operators</i> . . . . .	665–669
Z. Ciesielski, <i>Numerical integration with weights of convex functions of algebraic polynomials</i> . . . . .	671–679
D. Waterman, <i>Uniform estimates of a trigonometric integral</i>	681–685
S. K. Pichorides, <i>A note on the Littlewood–Paley square function inequality</i> . . . . .	687–691
M. Cotlar and C. Sadosky, <i>Toeplitz and Hankel forms related to unitary representations of the symplectic plane</i> . . . .	693–708
A. Olevskii, <i>A note on convergence to infinity of Fourier series</i>	709–712
Index alphabétique des auteurs du volume LX/LXI . . . . .	713
